Product Description

Thermal-Treated 304/L Stainless Steel Coil 3-20mm Thickness Hot Rolled

Stainless steel coils are primarily used in the construction and industrial industries. An iron-based alloy, stainless steel comprises 11% of chromium, along with traces of nitrogen, aluminum, sulfur, silicon, titanium, nickel, copper, and selenium. It is rust and heat resistant. There are various stainless steel grades determined by different quantities of chromium or nickel. Initially produced as stainless steel slabs, these slabs are converted into stainless steel coils using a range of manufacturing techniques.

Stainless steel coils are extensively used in manufacturing household utensils and industrial equipment like heat exchangers, heating elements, flexible tubing, cutlery products, and surgical instruments.
